XENTAURS

Cisco Secure Workload (CSW) xAdopt

The Cisco Secure Workload (CSW) xAdopt engagement follows our proven methodology to guide companies through their digital initiatives. We provide services that drive outcomes and ensure adoption on the journey to innovation.

Engagement Scope

Curation Call
Each xAdopt engagement begins with a project team meeting to validate customer goals, ensure all pre-work is complete, and define logistics for the interactive workshop.

Project Kickoff
Kick off the project with customer and Cisco teams. Review scope, expectations, and deliverables. Ensure the proper stakeholders are involved and define logistics for the interactive workshop.

Interactive Workshop
Xentaurs conducts an interactive workshop, remote or onsite, that provides an overview of the Cisco CSW platform architecture and use cases. Exercises will help document architecture and business requirements.

Build & Discovery
The Build & Discovery phase covers scopes, annotations, inventory filters, integrations, and application workspaces as well as running ADMs for initial policy creation while refining and validating white list policy.

Analysis
The analysis phase provides a deeper look into current policy set and categorizes flows. Xentaurs will meet with the application owners to review the categorized flows and discuss further refinement

Final Readout
The final deliverable is a findings readout which highlights key capabilities enabled by CSW's 24x7 data collection and real-time analytics, as well as recommendations and proposed next steps.

Deliverables

- List of workshop attendees and logistics
- PDF version of key presentation(s)
- White-board session snapshot (if any)
- Configuration snapshot of modelled app
- Completed CSAT questionnaire (if provided)
- Exported Policy (JSON) of modeled app
- Segmentation Roadmap and Recommendations

Engagement Scope

Application Modeling, 1 Application, 1 Environment, and up to 150 Workloads.
