

XENTAURS

Integrated Security for Healthcare Providers

Xentaurus is a premier Cybersecurity & Infrastructure-as-Code services integrator specializing in Healthcare Provider space with a proven track-record of success in hundreds of digital transformation projects including zero-trust initiatives to breach and ransomware defense.

Industry Challenges

- Healthcare facilities today need to provide virtual care, mobile patient access, remote work capabilities, and medical device proliferation which increases their portfolio of applications and exposure to attack.
- Healthcare had the highest average data breach costs among all sectors last year, Incidents of ransomware, breaches, and health records being exposed are growing at a much faster rate than other industries.

Technical Expertise

Hybrid Cloud

- Automation & Orchestration
- Software Defined Architectures
- Cloud Architecture
- Microsegmentation

Security

- Application Security
- Authentication Services
- Security Analytics
- Cloud Native Security

Our Solutions

Medical Devices & IoT Security

Application Security for Providers

Secure, Agile Network for Healthcare

Problems We Help Solve

Facilities today need to provide virtual care, patient access, and outreach programs while maintaining security, privacy, and compliance.

Dealing with increasingly growing medical devices that require connectivity and upgrading complex environments across distributed systems, which could compromise the security and health of patients, doctors, and care providers.

Ransomware and other modern Cybersecurity threats have dramatically changed the challenges Healthcare IT teams must solve for.

Success Story

High Level Solution

Large Healthcare Provider Required to Pass Regulatory Pen Test

Customer faced an aggressive timeline to ensure protection for their flagship applications after a security audit identified critical gaps. Xentaurus engaged to drive solutions that fit the customer strategy. Leveraging proven protection models around EPIC, GE PACS and other critical Healthcare applications Xentaurus embarked on accelerating the customer's zero-trust journey

Business Initiative

- Secure Applications & Records
- Device Automation & Lockdown
- Proactive Anomaly Detection

Outcome

- 7M records exposed to less than <100
- Automatically profile users and devices and give them secured access
- Threats are discovered before they impact the business
